

Preempt Lite

Preempt Lite provides an easy and continuous solution to improve your security posture, reduce risk, and strengthen your Active Directory hygiene.

Are you at risk? Attackers rely heavily on compromising user credentials and network weaknesses to breach organizations. Weaknesses like shadow admins, hidden or inactive accounts, misconfigurations and other risk factors make it easy for intruders to establish persistence and move throughout your network. In addition, employees often use weak passwords, further exacerbating the problem. You need an easy way to gain visibility and control over your critical systems and applications.

Benefits

- ✓ Fast-to-Deploy, Easy-to-Use
- ✓ Get Instant Visibility Into Users & Accounts
- ✓ Strengthen Active Directory Controls
- ✓ Detect Network Gaps and Weaknesses
- ✓ Meet Auditing Requirements
- ✓ Auto-Remediate Risk with an Easy Upgrade

The Solution: Preempt Lite

Preempt Lite's continuous insights and analytics help enhance your security posture by reducing your attack surface and improving Active Directory hygiene. In less than 2 hours, you will be able to gain valuable and actionable insights.

Discover All Accounts, Including Shadow Admins

Discover all users in your network (business, privileged, service, etc) so you can determine which accounts are human vs. machine, stale, hidden, active or inactive. In addition, automatically discover stealthy (or shadow) administrators who are not part of a protected AD group so that you quickly mitigate risk.

Uncover Network Weaknesses

Misconfigurations, weak AD controls, unknown workstations, potential malware, out-of-date OS, and other risk factors are all visible to you to take action against to protect your network from a potential breach.

Detect Weak and Exposed Credentials and Accounts

Preempt's deep contextual intelligence and library of hashes is combined with password dictionaries to reveal already compromised passwords. In addition, continuous monitoring capabilities allows for the exposure of users with weak, stale, or exposed credentials that are easily leveraged by attackers. This visibility allows security teams to recommend remediation strategies and enforce best practices for policy and control.

Preempt Lite

Expose Potential Risk Factors

Risk factors such as suspicious SID (security identifier) history, workstations that do not require SMB signing, accounts with delegation privileges, and inappropriately configured controls are instantly detected with Preempt.

Improve GPO Configurations

GPO (Group Policy Object) can be difficult to manage and oftentimes creates confusion when analyzing configurations. Preempt Lite gives you a unique parsing engine which analyzes settings and provides insights such as calculations of password policy, analysis of domain security settings, and more.

Easy Upgrade to the Preempt Platform

Preempt Lite is part of a broader effort by Preempt to give customers the visibility and control over their AD environment and protect against internal security threats. The Preempt Platform not only empowers organizations to optimize the Identity hygiene for all users, accounts, and assets but it preempts threats in real time with Conditional Access. Uniquely, our patented technology continuously analyzes, adapts, and responds to threats based on identity, behavior, and risk to auto-resolve threats and risk.

When you upgrade to the Preempt Platform you will gain full behavior analytics, real-time threat detection, and conditional access capabilities to preempt threats before they impact your business. To upgrade and gain access to the full platform capabilities is as simple as a license change with absolutely no impact to your deployment.

Requirements

- ✓ A service account for Preempt with specific privileges
- ✓ Access to an on-premises hyper visor or your current cloud infrastructure with rights to allocate resources and to install the Virtual Management server

How to Get Started

Experience Preempt's continuous identity insights capabilities today. Download, install and get instant value. Here's how it works:

1. **Download Today** - Contact trypreempt@preempt.com or your local sales rep to apply.
2. **Simple Installation** - Simply allocate a virtual server either on-premises or on your private cloud and grant it network access to the Domain Controllers.
3. **Start Gaining Insights** - Get immediate value and visibility into your AD configuration, users, and potential risk.
4. **Stay on Track** - With the Preempt Lite program you will get periodic guidance from Preempt on recommendations for improving your security posture. These include self-guided exercises that you can complete at your own pace.
